

Bamboo Fiber and the Manufacture Thereof

Abstract of the Disclosure

The present invention is related to a bamboo fiber, which uses bamboo as raw material, providing a kind of raw materials for making face fabric instead of cotton, chemical fiber, hemp and silk, and the production method of this kind of fiber includes the procedures of bamboo pretreatment, bamboo separation, bamboo fiber forming and its after treatment, in which it adopts a degumming softening agent made up according to a wild plant formula, and its neutral in acidity-alkalinity ensures no environmental pollution. The face fabric made of bamboo fiber is good in flexibility, permeability and is UV-resistant or ultraviolet resistant, low cost and high comfort in summer.
